

Derek Gobbett (1934-2016)

(unfinished work)

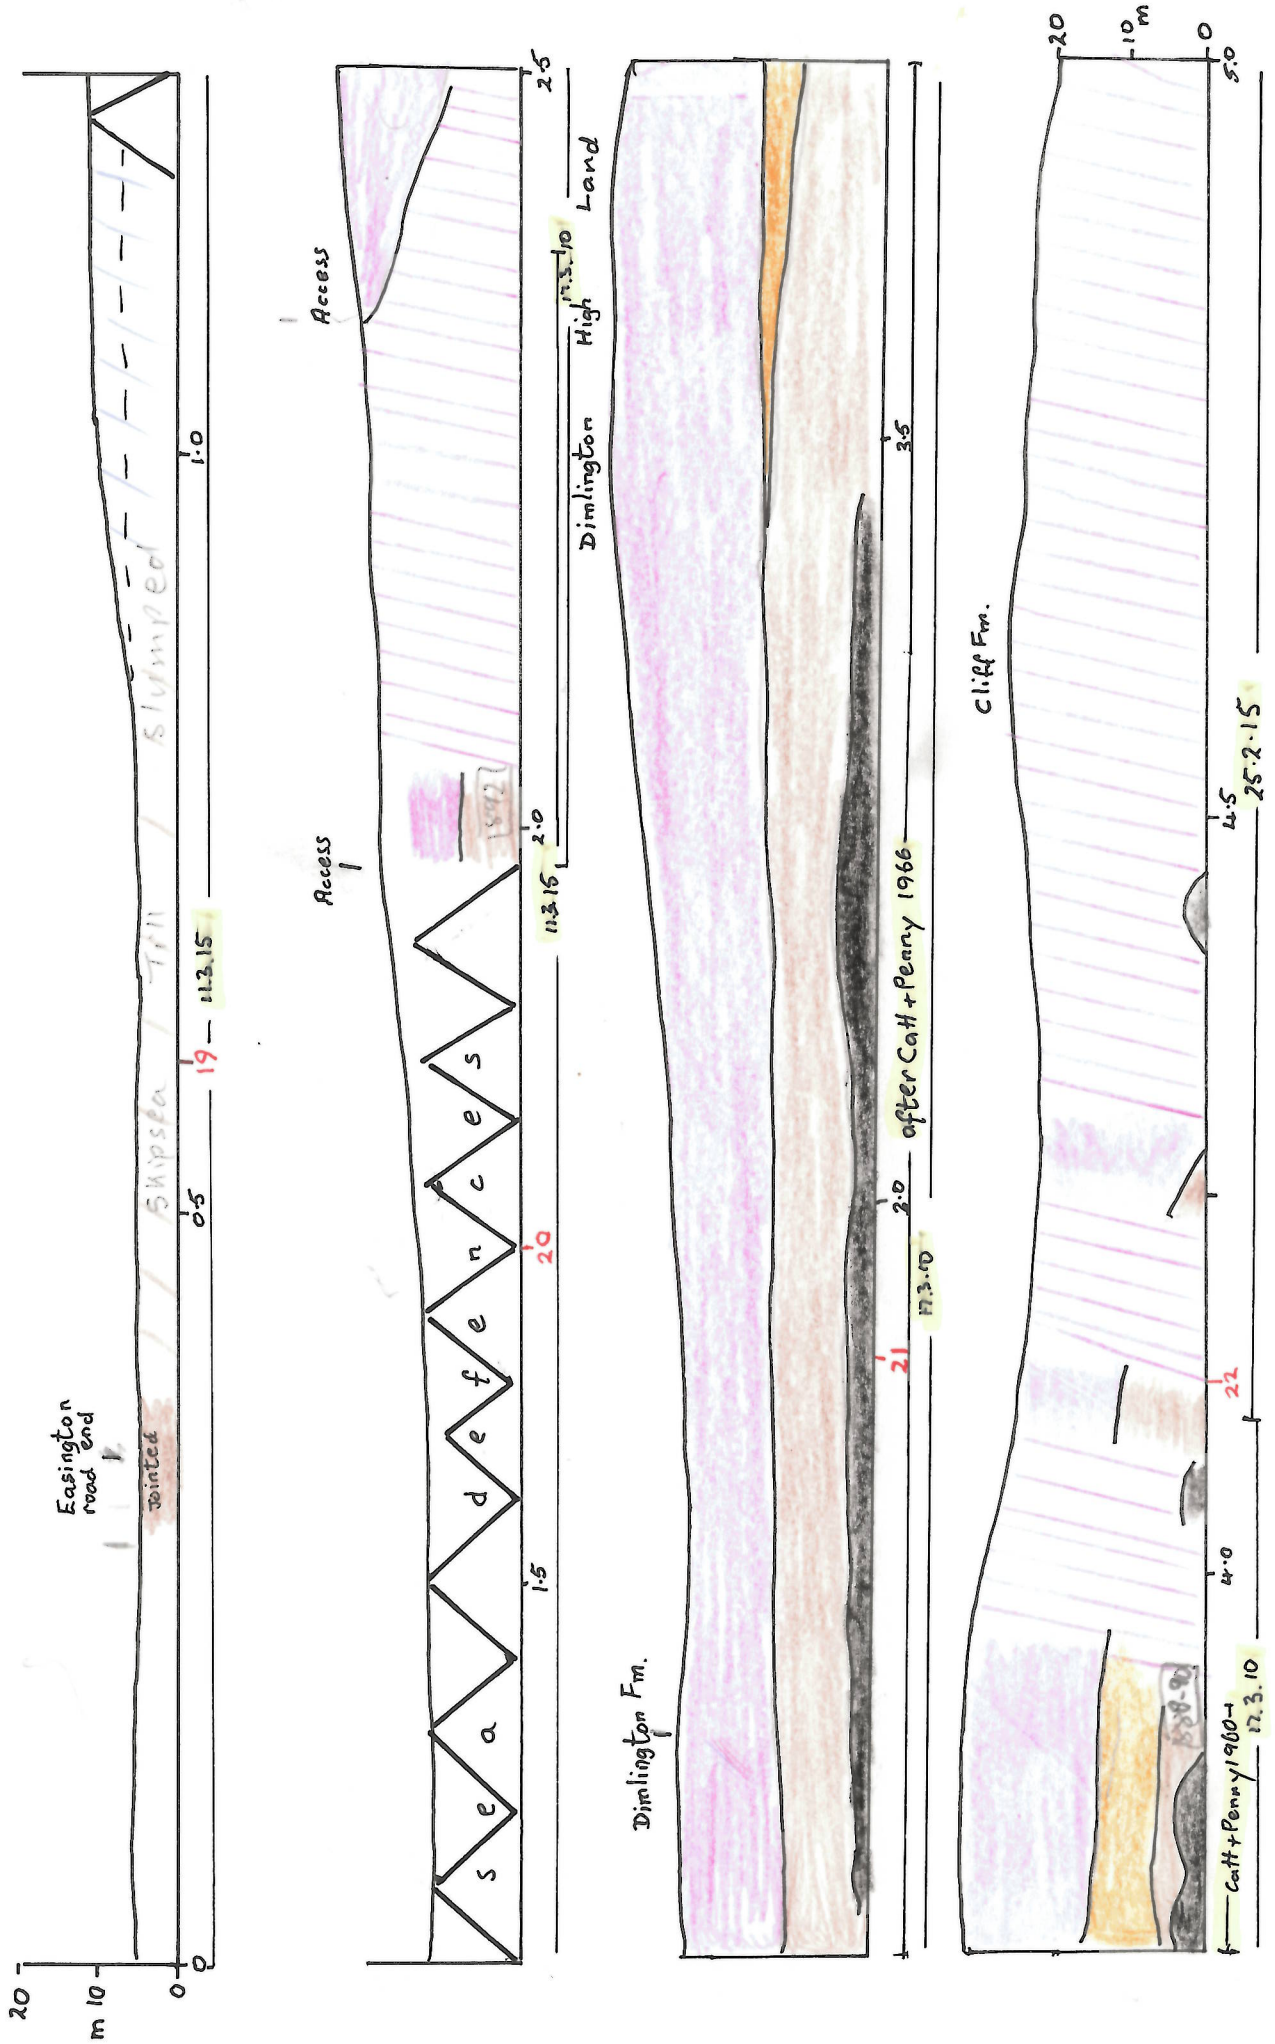

A cross section of the Holderness cliffs from Easington to South Sands, Bridlington.

Notes –

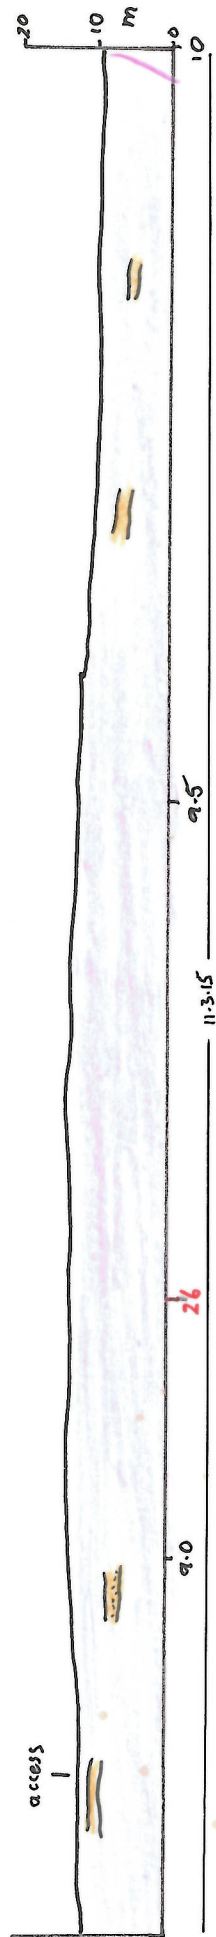

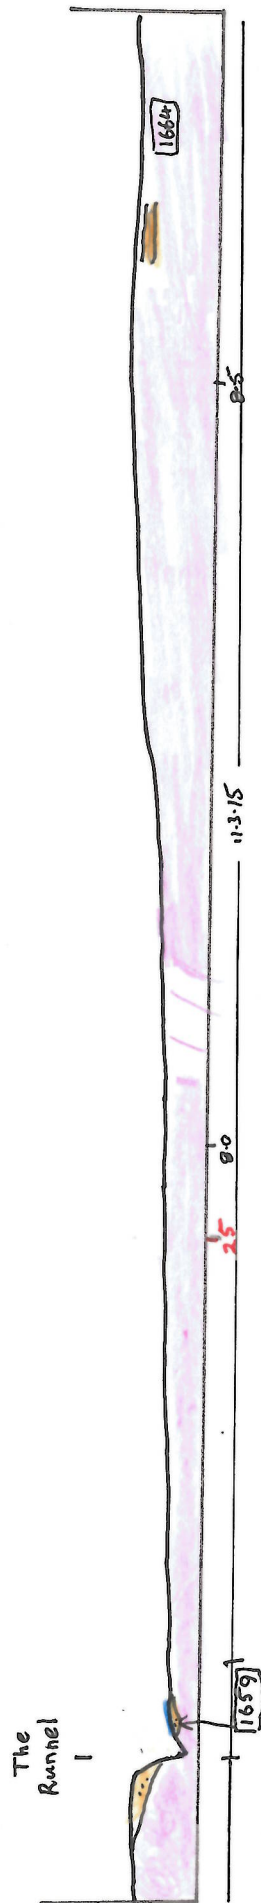

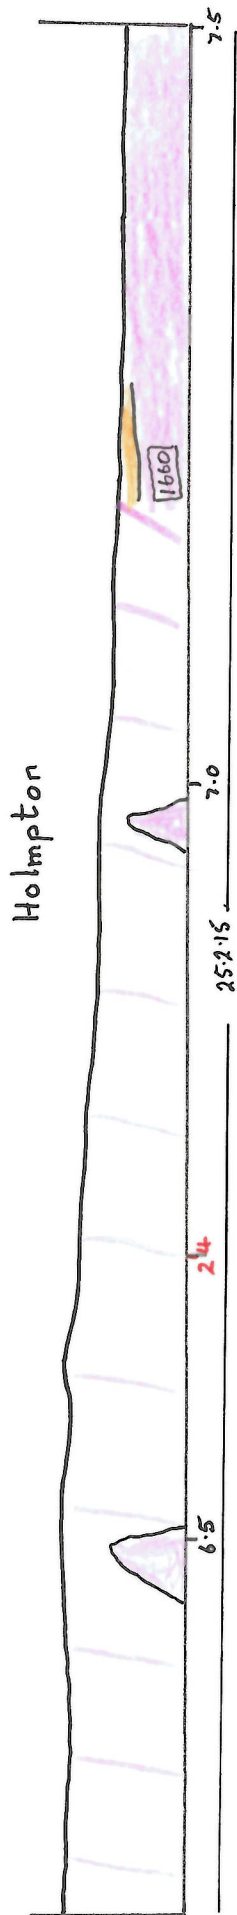

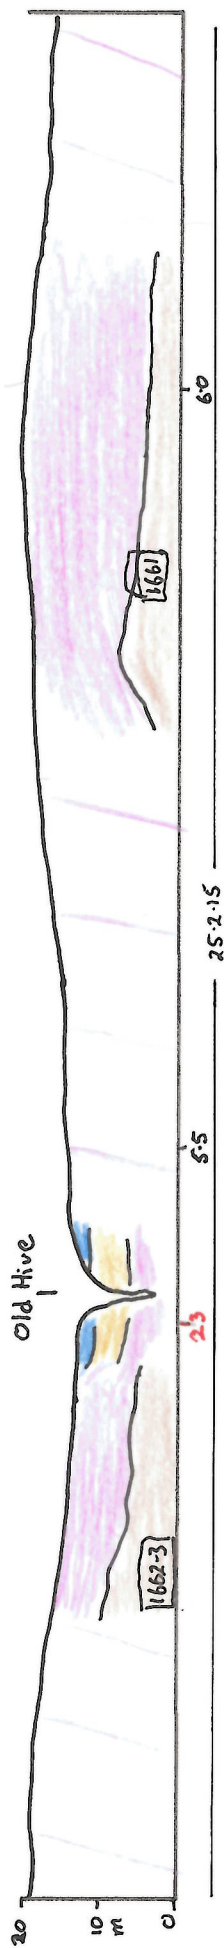

The fieldwork was carried out between October 2009 and May 2016. The Hull Geological Society thanks Margaret Gobbett for the donation of Derek's archives and for permission to publish unfinished works. The donation did not include field notebooks or logging sheets, so we do not know what methods Derek used to compile this cross section or how accurate it is. The height of the cliffs was probably obtained from OS maps and the stratigraphy of the cliffs from estimations made during fieldwork.
